

AMENDMENTS TO THE SPECIFICATION

Please amend paragraph [0036] of the specification as follows:

As shown in **Figure 3**, a cursor 320 is highlighting the contacts icon 312 on icon row 310, and the device displays the contacts view display screen 155. Menu items 330-1 to 330-N in the contacts view include the names of one or more contacts, along with the phone numbers for each contact. A user may scroll through the list of items in the contacts menu by using keys, such as buttons 181 and 182 or rocker 165 for example, to move menu item cursor 340. When a phone number is highlighted by menu item cursor 340, the user may dial the highlighted phone number by pressing one or more execution keys.

Please amend paragraph [0038] of the specification as follows:

As shown in **Figure 4**, cursor 320 is highlighting the dial pad icon 313. The display screen 155 displays the items 450-1 to 450-15 of the dial pad view, which include a telephone dial pad 410. The user may dial a telephone number by using numeric keys on the keyboard 160. The user may also select numbers by touching the desired numbers shown on display 155. Pressing a key such as button 181 or 182, or rocker 165, causes the display 155 to show a previously dialed number. Pressing the key again causes the display to scroll through a list of previously dialed numbers. The item 450-15 with the telephone symbol may dial the telephone number when it is selected by a user. Alternatively, the number may be dialed by pressing rocker 165.

Please amend paragraph [0024] of the specification as follows:

A cursor 220 can be moved to a given menu 215-1 to 215-D of menu bar 210 using a key, for example, scroll-up button 181. Pressing button 181 displays the next menu, and the corresponding menu items for the next menu. For example, cursor 220 may initially highlight one of the menus, such as record menu 215-1. Pressing button 181 when the cursor is highlighting a top menu item, or a menu, causes the cursor to move to another menu. As the cursor 220 moves from one menu, such as menu 215-1 for example, to another menu, such as adjacent menu 215-2 for example, menu 215-1 becomes unhighlighted and menu 215-2 becomes highlighted. Pressing button 181 from the last menu 215-n may scroll the cursor, or highlight, back to the first menu 215-1. Holding button 181 may repeat this action of moving the cursor to the next menu at a given repeat rate. Thus, when the cursor is highlighting a menu name, pressing button 181 causes the cursor 220 to selectively highlight the next menu 215 in menu bar 210.

Please amend paragraph [0038] of the specification as follows:

As shown in **Figure 4**, cursor 320 is highlighting the dial pad icon 313. The display screen 155 displays the items 450-1 to 450-15 of the dial pad view, which include a telephone dial pad 410. The user may dial a telephone number by using numeric keys on the keyboard 160. The user may also select numbers by touching the desired numbers shown on display 155. Pressing a key such as button 181 or 182, or rocker 165, causes the display 155 to show a previously dialed number. Pressing the key again causes the display to scroll through a list of previously dialed numbers. The item 450-15 with the telephone symbol may dial the telephone

number when it is selected by a user. Alternatively, the number may be dialed by pressing rocker 165.

Please amend paragraph [0023] of the specification as follows:

Pressing menu key 180 causes the device to enter menu mode and to display one or more menus in a menu bar. For example, **Figure 2** shows an example of a screen shot of display screen 155 when the device is in menu mode. The screen displays menu bar 210. The menu bar includes one or more menus 215-1 to 215-D ~~215-n~~. In this example, the menus include 215-1, 215-2, and 215-D ~~215-n~~. Pressing and releasing the menu key a second time may dismiss the displayed menus. Alternatively, another key, such as a backspace key for example, may dismiss the displayed menu.

Please amend paragraph [0031] of the specification as follows:

The rocker 165 can be used to move the cursor 220 through the menu bar 210 and through the list of items 230. For example, rotating, or moving, the rocker in a first direction, such as “up,” can cause the cursor to scroll through the menus 215-1 to 215-D ~~215-n~~ in the menu bar, to permit a user to highlight a desired menu. Thus, when the cursor is highlighting the first item, moving the rocker in the first direction may cause the cursor to highlight another menu, such as the edit menu. The items 230 associated with the highlighted menu may be displayed as discussed above.

Please amend paragraph [0025] of the specification as follows:

Each menu has a set 230 of one or more items associated with the menu. When a menu is highlighted, the set of items 230 associated with the highlighted menu, are displayed. For example, when the record menu is highlighted, record menu items 240-1 to 240-N ~~240-n~~ are displayed.

Please amend paragraph [0041] of the specification as follows:

As shown in **Figure 6A**, the cursor 320 is highlighting speed dial icon 311. The display screen 155 displays the speed-dial view corresponding to icon 311, which includes a page 620 of menu items containing names 625-1 through 625-N ~~625-n~~. Executing a name 625 on page 620 causes the device to dial a telephone number associated with the name. A user may scroll through the items, or names, on the page of menu items by using keys on the keyboard or using the rocker as discussed above.
